Claims 1-12 of the present invention relate to a method of providing an arbitrary sound as an RBT(Ring Back Tone) in a communication network, comprising:

a first step, conducted by an HLR(Home Location Register's), of furnishing a call-originating exchanger with first information on whether RBT is to be replaced or not and second information informing a route to sound providing means through a response to a location request message received from the call-originating exchanger that sends the location request message to the HLR when a call connection is requested;

a second step, conducted by the call-originating exchanger, of requesting a trunk connection to both of a call-terminating exchanger and the sound providing means based on the response including the first and the second information while furnishing the sound providing means with information identifying a called; and

a third step, conducted by the sound providing means, of selecting an RBT-replacing sound based on the called-identifying information, and providing the selected RBT-replacing sound for a caller through the call-originating exchanger the trunk connection is made to.

D1-D9 do not include the features of claims 1-12.

Hence, the subject-matter of Claims 1-12 is novel and inventive according to PCT Article 33(2) and (3).

The industrial applicability of Claims 1-12 is self-evident in the sense of Article 33(4) PCT.
